

IT Asset Disposition (ITAD) Services

Secure Asset Retirement. Responsible Processing. Complete Lifecycle Control.

At **Relocentric**, IT Asset Disposition is more than equipment removal. It is a structured, security-conscious, and professionally managed process designed to help organizations retire IT assets with confidence, visibility, and control.

We support businesses in handling end-of-life IT equipment through organized solutions covering asset collection, auditing, logistics, secure data destruction coordination, buyback support, recycling, and responsible downstream processing. Our ITAD services are built for organizations that need a dependable partner to manage asset retirement without compromising on security, compliance, reporting, or operational discipline.

Whether the requirement involves a single-site collection, a multi-location asset disposition program, office IT retirement, or technology refresh-related clearance, Relocentric provides complete ITAD support aligned with modern business needs.

What We Do

IT Asset Collection & Consolidation

We manage the collection of retired or excess IT assets from office locations, project sites, storage points, and business environments in a structured and controlled manner.

Our team supports organized pickups, site-level coordination, asset segregation, and consolidation workflows to make the asset disposition process more efficient and easier to manage.

Asset Auditing & Tracking

A successful ITAD program begins with visibility. We support asset-level identification and tracking to help businesses maintain better control over retired equipment throughout the disposition cycle.

This includes asset recording, serial-based handling support, movement control, and reporting-oriented asset management to improve traceability and accountability.

Secure Data Destruction Coordination

Data-bearing assets require disciplined handling during retirement. Relocentric supports secure data destruction workflows as part of broader ITAD execution, helping clients ensure that sensitive information is managed responsibly during the end-of-life process.

Our services are aligned to the practical needs of organizations handling laptops, desktops, drives, servers, storage devices, and other technology assets that may contain critical business data.

Buyback & Value Recovery Support

Where applicable, we help clients identify value recovery opportunities for retired IT assets through structured buyback and remarketing support.

Our objective is to help businesses recover commercial value from reusable assets while maintaining transparency, practicality, and alignment with the condition and market viability of the equipment.

Responsible Recycling & End-of-Life Processing

For non-recoverable or non-reusable assets, Relocentric supports responsible recycling and environmentally aligned downstream handling.

Our approach is designed to help clients manage retired assets in a way that supports process control, documentation discipline, and more responsible end-of-life outcomes.

ITAD Logistics Management

ITAD is closely connected to controlled logistics. We coordinate the movement of retired assets through organized collection planning, packaging support, transfer logistics, and process-linked movement control so that the entire lifecycle closure remains connected and visible.

What Our ITAD Services Cover

Our ITAD solutions typically support:

- Collection of retired IT assets
- Asset auditing and serialized tracking
- ITAD logistics and consolidation
- Secure handling of data-bearing equipment
- Data destruction coordination
- Buyback and value recovery support
- Responsible recycling support
- Office closures and IT asset clearance
- Technology refresh-related asset removal
- Multi-site disposition programs

Why Businesses Choose Relocentric for ITAD

Security-Focused Execution

We understand that retired IT assets often carry data, compliance sensitivity, and reputational risk. Our approach is structured around control and accountability.

End-to-End Service Coordination

From collection and movement to destruction support, buyback, and recycling, we connect the full ITAD journey under one coordinated service model.

Operational Simplicity for Clients

Instead of managing multiple vendors across collection, handling, and downstream processing, clients work with one organized execution partner.

Practical Value Recovery

Where assets have residual value, we help businesses explore buyback and remarketing options to improve financial outcomes from retired equipment.

Where Our ITAD Services Add Value

Relocentric's ITAD services are ideal for:

- IT refresh programs
- Office IT asset retirement
- End-of-life equipment clearance
- Business relocations and closures
- Asset consolidation projects
- Multi-location enterprise IT disposition
- Secure handling of obsolete technology infrastructure

Our Approach

We begin by understanding the asset profile, site requirements, security expectations, and project objective. From there, our team manages the disposition workflow with structured coordination, visibility, and execution discipline.

Our goal is to make IT asset retirement:

- Secure
- Controlled
- Transparent
- Efficient
- Environmentally responsible

Retire IT Assets with Confidence

At Relocentric, we help organizations close the IT asset lifecycle in a more secure, organized, and responsible way.

From **asset collection** and **secure handling** to **data destruction coordination**, **buyback**, and **recycling support**, our ITAD services are built to simplify asset retirement while protecting business interests.

IT Infrastructure Services

Planned for Performance. Deployed with Precision. Built for Business Continuity.

At **Relocentric**, IT infrastructure services are designed to help businesses create work environments that are technically ready, operationally aligned, and structured for seamless day-to-day use.

We support organizations with the movement, setup, deployment, and coordination of workplace IT infrastructure across offices, project sites, expansion programs, and relocation environments. Our approach is focused on helping businesses operationalize technology infrastructure in a way that supports productivity, readiness, and continuity.

Whether it is a new office setup, internal expansion, department reconfiguration, infrastructure movement, or workplace transition, Relocentric provides practical IT infrastructure support that aligns with business timelines and workspace requirements.

What We Do

IT Infrastructure Setup

We support the physical setup and deployment of workplace IT infrastructure required to make office environments functional and ready for use.

This includes the coordinated placement and setup of devices, workplace systems, networking-related hardware, office technology assets, and user-end infrastructure across business spaces.

Workstation & End-User Deployment Support

A workplace becomes operational only when end-user infrastructure is properly positioned and deployment-ready. We support workstation setup and user-area deployment requirements so businesses can transition into functional spaces more smoothly.

This includes setup coordination for deskside IT equipment, user devices, peripheral placement, and work-area readiness support.

Infrastructure Support During Office Relocation

When offices move, IT infrastructure must move with precision. Relocentric supports the coordinated transition of infrastructure assets during office relocation projects, helping businesses reduce confusion, manage setup sequencing, and improve readiness at the destination site.

Our team aligns infrastructure movement and setup with broader relocation schedules and workspace activation requirements.

New Office IT Readiness Support

For new office environments, we help coordinate the IT infrastructure elements required to support business activation. This ensures the workplace is not only physically ready, but also technically prepared for functional occupancy.

We work alongside planning, fit-out, logistics, and Capex deployment teams to make the office setup process more connected and execution-friendly.

Multi-Location IT Deployment Coordination

Organizations operating across multiple offices often need structured support for device deployment, infrastructure movement, rollout coordination, and location-based implementation.

Relocentric supports such requirements with centralized coordination and local execution support to help businesses manage IT deployment with greater consistency.

Infrastructure Handling & Movement

In many projects, infrastructure does not remain static. Equipment may need to be shifted, redeployed, relocated, or reorganized as part of office changes, project execution, or operational realignment.

We support controlled infrastructure movement so businesses can make transitions without unnecessary disruption.

What Our IT Infrastructure Services Cover

Our IT infrastructure support typically includes:

- Workplace IT infrastructure setup
- Workstation deployment support
- Office technology asset placement
- User-end equipment setup coordination

- Infrastructure movement during relocation
 - New office IT readiness support
 - Multi-site deployment coordination
 - Office expansion and reconfiguration support
 - Integration with fit-out, logistics, and Capex execution
-

Why Businesses Choose Relocentric for IT Infrastructure

Aligned with Workspace Execution

We understand that IT infrastructure does not exist in isolation. It must align with office planning, fit-out, relocation, furniture setup, and business activation.

Coordinated, Not Fragmented

Our service model reduces the operational gap between physical office readiness and technical readiness by connecting infrastructure setup with the wider project environment.

Support for Business Continuity

We help businesses move, install, and activate infrastructure in a way that supports continuity, faster readiness, and smoother transitions.

Built for Real Office Environments

Our approach is practical, workplace-oriented, and execution-focused, making it well-suited for dynamic office projects and operational business spaces.

Where Our IT Infrastructure Services Add Value

Relocentric's IT infrastructure services are ideal for:

- New office setup
- Office relocation projects
- Workplace expansion
- Internal office reconfiguration

- Department-wise deployment
 - Multi-location office rollout programs
 - Business continuity-driven setup projects
-

Our Approach

We begin by understanding the office requirement, infrastructure scope, deployment priorities, and readiness timeline. From there, our team coordinates setup and movement activities to support operational activation with better control and smoother execution.

Our goal is to make IT infrastructure deployment:

- Organized
 - Practical
 - Business-aligned
 - Scalable
 - Ready for use
-

Build Office Technology Readiness with Confidence

At Relocentric, we help businesses set up and transition IT infrastructure with the coordination and execution discipline needed for modern workplaces.

From **workstation deployment** and **office IT setup** to **relocation-linked infrastructure movement** and **multi-site rollout support**, we create IT-ready environments that help organizations operate smoothly from day one.
