

EPR Services

Responsible Compliance. Structured Execution. Sustainable Business Support.

At **Relocentric**, EPR services are designed to help businesses manage their environmental responsibility with better structure, visibility, and operational control. We support organizations in aligning their disposal and recycling obligations with practical execution through coordinated collection, channel support, documentation, and process-driven handling.

Our EPR service model is built for businesses that want a dependable partner to support responsible waste management outcomes, especially in relation to end-of-life office, electronic, and operational assets. We help clients move beyond fragmented disposal practices toward a more organized and accountable sustainability process.

Whether the requirement is linked to office transitions, IT asset retirement, bulk obsolete materials, or environmentally responsible downstream handling, Relocentric provides EPR support that connects compliance intent with real execution.

What We Do

EPR-Aligned Collection Support

We coordinate the collection of end-of-life materials, retired office assets, and obsolete equipment in a structured manner so businesses can channel items through more responsible disposal and recycling pathways.

Our team helps simplify the first step of the EPR journey by ensuring materials are identified, collected, and moved through organized workflows.

Responsible Channeling of Retired Assets

EPR is not just about removal. It is about ensuring that materials are directed into appropriate downstream processes. Relocentric supports clients by helping create a clearer link between retired assets and responsible processing channels.

This helps organizations manage asset retirement with stronger environmental intent and better operational discipline.

Documentation & Process Support

A strong EPR program needs better documentation, tracking, and coordination. We support process-linked documentation and reporting practices that help clients maintain better visibility over materials handled through EPR-related workflows.

Our focus is on making the process easier to follow, better organized, and more aligned with responsible business expectations.

Integration with ITAD & Office Asset Disposal

Many EPR requirements arise during IT asset retirement, office decommissioning, relocation, and workspace upgrades. Relocentric connects EPR support with broader services such as ITAD, logistics, and office clearance so clients can manage everything through one coordinated execution model.

This reduces operational fragmentation and creates a more practical path toward responsible disposal.

Support for Sustainability-Focused Business Practices

Businesses today are expected to operate with stronger environmental accountability. Our EPR services are designed to support that goal by helping clients manage retired materials, obsolete assets, and workplace waste streams more responsibly.

We help organizations strengthen their sustainability approach through structured handling and better downstream coordination.

Coordination Across Collection, Logistics & Recycling Support

EPR execution often depends on multiple moving parts, including pickup, segregation, logistics, channel coordination, and process tracking. Relocentric helps organize these activities into a more connected workflow so clients can manage EPR-related requirements with greater ease.

What Our EPR Services Cover

Our EPR support typically includes:

- Collection coordination for end-of-life materials
 - EPR-linked office and IT asset handling support
 - Responsible channeling of obsolete assets
 - Process and documentation support
 - Logistics coordination for retired materials
 - Sustainability-aligned disposal workflows
 - Integration with ITAD and office clearance projects
 - Support for organized recycling pathways
 - Multi-site EPR coordination support
 - Business-friendly execution for responsible waste handling
-

Why Businesses Choose Relocentric for EPR Services

Practical Support for Responsible Disposal

We help businesses turn sustainability intent into workable action through structured collection, coordination, and process support.

Connected to Real Business Operations

Our EPR services fit naturally into relocation, ITAD, logistics, office upgrades, and asset retirement programs, making execution simpler for clients.

Better Coordination, Less Fragmentation

Instead of handling EPR needs separately from other workplace and asset services, clients can rely on one partner for a more integrated approach.

Built Around Accountability

We bring process discipline, coordination, and documentation support so businesses can manage EPR-related requirements with better control and confidence.

Where Our EPR Services Add Value

Relocentric's EPR services are ideal for:

- IT asset retirement programs
 - Office decommissioning and clearance
 - Bulk obsolete asset disposal
 - Workspace renovation and upgrade projects
 - Sustainability-focused corporate operations
 - Multi-location asset collection requirements
 - Businesses seeking more responsible downstream handling
-

Our Approach

We begin by understanding the type of materials involved, the scale of collection, the project context, and the client's environmental objectives. From there, our team coordinates the workflow in a structured way to support responsible handling, smoother movement, and better execution visibility.

Our goal is to make EPR support:

- Organized
- Practical
- Responsible
- Business-aligned
- Easier to manage

Support Sustainability with Better Execution

At Relocentric, EPR services are built to help businesses manage environmental responsibility through structured action, not just policy intent.

From **collection coordination** and **responsible channeling** to **documentation support** and **integration with ITAD and disposal workflows**, we help organizations handle end-of-life materials in a more controlled and accountable way.
